PROJECTS

NewsMonkey - A News App(using React.js and News API)

- Introduction : NewsMonkey is a web application built using React.js that allows users to browse and read top news headlines from various categories. Leveraging the News API, NewsMonkey provides real-time news updates on topics ranging from business, entertainment, health, science, sports, to technology.
- News API :The application dynamically fetches news articles from the API, ensuring users have access to the latest information
- Category-Based News: The application organizes news articles into different categories, making it easy for users to find relevant information based on their interests.
- Infinite Scrolling: News articles are displayed using an infinite scrolling mechanism, allowing users to continuously load more articles as they scroll down the page. This provides a seamless browsing experience without the need for pagination.

iNotebook: A Modern Digital Notebook Application (using React.js and MongoDB)

- User Authentication and Authorization: Secure user registration and login functionality to ensure data privacy and access control. Users can create accounts, log in securely, and manage their profiles.
- Note Management: A user-friendly interface for creating, editing, organizing, and deleting notes. Users can categorize notes into different notebooks or tags for easy retrieval and organization.
- Cross-Platform Compatibility: Access the Inotebook application from any device or platform, including web browsers, desktop computers, and mobile devices. The responsive design ensures a consistent user experience across different screen sizes and devices.
